

(a) Laboratory-frame driven lattice

$$F(t) = F_0 \cos(\omega t)$$

$$\hat{H}(t) = -J \sum_j \left(\hat{c}_{j+1}^\dagger \hat{c}_j + \text{H.c.} \right) + K \cos(\omega t) \sum_j j \hat{n}_j$$

periodic force $\rightarrow$ time-dependent tunnelling phase

(b) Floquet-reduced description

$$J_{\text{eff}} = J J_0\left(\frac{K}{\omega}\right)$$
